NORTH-HOLLAND

SUBJECT INDEX OF VOLUME 64

Boundary element methods

BIE method to analyze wave motion in solids with periodically distributed cavities, M. Kitahara and J.D. Achenbach (1–3) 523–536

Design of programs

Algorithms and experiments for structural mechanics on high-performance architectures, M.W. Berry and R.J. Plemmons (1–3) 487–507

Dynamics

BIE method to analyze wave motion in solids with periodically distributed cavities, M. Kitahara and J.D. Achenbach (1–3) 523–536

Elasticity

BIE method to analyze wave motion in solids with periodically distributed cavities, M. Kitahara and J.D. Achenbach (1–3) 523–536

Electromagnetic fields

Numerical tests of a modified full implicit continuous Eulerian (FICE) scheme with projected normal characteristic boundary conditions for MHD flows, S.T. Wu and J.F. Wang (1–3) 267–282

Mixed and penalty formulations for finite element analysis of an eigenvalue problem in electromagnetism, F. Kikuchi (1–3) 509–521

Finite difference methods

Calculation of external-internal flow fields for mixed-compression inlets, W.J. Chyu, T. Kawamura and D.P. Bencze (1–3) 21– 37

A numerical model for supersonic reacting mixing layers, J.P. Drummond, R.C. Rogers and M.Y. Hussaini (1–3) 39– 60

A simple iterative procedure for reducing stiffness and computer memory in reactive flow problems, A.N. Eraslan and R.C. Brown (1–3) 61– 77

Flow solution on a dual-block grid around an airplane, L.-E. Eriksson (1–3) 79– 93
Simulation of transonic flow in radial compressors, L.-E. Eriksson (1–3) 95–111
Smoothing and the second law, M.L. Merriam (1–3) 177–193
Numerical tests of a modified full implicit continuous Eulerian (FICE) scheme with projected normal characteristic boundary conditions for MHD flows (1–3) 267–282
Algebraic grid generation, R.E. Smith and L.-E. Eriksson (1–3) 285–300
On the use of composite grid schemes in computational aerodynamics, J.L. Steger and J.A. Benek (1–3) 301–320
Adaptive grid generation, P.R. Eiseman (1–3) 321–376
A general three-dimensional elliptic grid generation system on a composite block structure, J.F. Thompson (1–3) 377–411

Finite element and matrix methods

Characteristic Petrov–Galerkin subdomain methods for two-phase immiscible flow, M.S. Espedal and R.E. Ewing (1–3) 113–135
Velocity weighting techniques for fluid displacement problems, R.E. Ewing, R.F. Heinemann, J.V. Koebbe and U.S. Prasad (1–3) 137–151
Nonlinear/linear unified thermal stress formulations: Transfinite element approach, K.K. Tamma and S.B. Railkar (1–3) 415–428
Nonlinear analysis of isotropic, orthotropic and laminated plates and shells, H. Rothert and W. Dehmel (1–3) 429–446
FE thermomechanics and material sampling points, E. van der Giessen (1–3) 447–465
Mixed and penalty formulations for finite element analysis of an eigenvalue problem in electromagnetism, F. Kikuchi (1–3) 509–521
Global mode hourglassing control, J.C. Schulz (1–3) 553–566

Fluid mechanics

A deterministic view of shear turbulence, S.I. Cheng (1–3) 5– 19
Calculation of external-internal flow fields for mixed-compression inlets, W.J. Chyu, T. Kawamura and D.P. Bencze (1–3) 21– 37
A numerical model for supersonic reacting mixing layers, J.P. Drummond, R.C. Rogers and M.Y. Hussaini (1–3) 39– 60
A simple iterative procedure for reducing stiffness and computer memory in reactive flow problems, A.N. Eraslan and R.C. Brown (1–3) 61– 77
Flow solution on a dual-block grid around an airplane, L.-E. Eriksson (1–3) 79– 93
Simulation of transonic flow in radial compressors, L.-E. Eriksson (1–3) 95–111
Characteristic Petrov–Galerkin subdomain methods for two-phase immiscible flow, M.S. Espedal and R.E. Ewing (1–3) 113–135
Recent developments and engineering applications of the vortex cloud method, R.I. Lewis (1–3) 153–176
A comparison of numerical algorithms for unsteady transonic flow, W.A. Sotomayer, L.N. Sankar and J.B. Malone (1–3) 237–265

Numerical tests of a modified full implicit continuous Eulerian (FICE) scheme with projected normal characteristic boundary conditions for MHD flows, S.T. Wu and J.F. Wang (1–3) 267–282

Heat and diffusion

A simple iterative procedure for reducing stiffness and computer memory in reactive flow problems, A.N. Eraslan and R.C. Brown (1–3) 61– 77
Velocity weighting techniques for fluid displacement problems, R.E. Ewing, R.F. Heinemann, J.V. Koebbe and U.S. Prasad (1–3) 137–151
Modified equation techniques for reactive-diffusive systems. Part 1: Explicit, implicit, and quasilinear methods, J.I. Ramos (1–3) 195–219
Modified equation techniques for reactive-diffusive systems. Part 2: Time linearization and operator-splitting methods, J.I. Ramos (1–3) 221–236
Nonlinear/linear unified thermal stress formulations: Transfinite element approach, K.K. Tamma and S.B. Railkar (1–3) 415–428
FE thermomechanics and material sampling points, E. van der Giessen (1–3) 447–465

Incompressible and near incompressible media

Characteristic Petrov–Galerkin subdomain methods for two-phase immiscible flow, M.S. Espedal and R.E. Ewing (1–3) 113–135

Nonlinear mechanics

Nonlinear analysis of isotropic, orthotropic and laminated plates and shells, H. Rothert and W. Dehmel (1–3) 429–446
Duality and variational principles of potential boundary value problems, G. Alduncin (1–3) 469–485

Numerical solution procedures

A deterministic view of shear turbulence, S.I. Cheng (1–3) 5– 19
Recent developments and engineering applications of the vortex cloud method, R.I. Lewis (1–3) 153–176
Smoothing and the second law, M.L. Merriam (1–3) 177–193
Modified equation techniques for reactive-diffusive systems. Part 1: Explicit, implicit, and quasilinear methods, J.I. Ramos (1–3) 195–219
Modified equation techniques for reactive-diffusive systems. Part 2: Time linearization and operator-splitting methods, J.I. Ramos (1–3) 221–236
A comparison of numerical algorithms for unsteady transonic flow, W.A. Sotomayer, L.N. Sankar and J.B. Malone (1–3) 237–265
Algebraic grid generation, R.E. Smith and L.-E. Eriksson (1–3) 285–300
On the use of composite grid schemes in computational aerodynamics, J.L. Steger and J.A. Benek (1–3) 301–320
Adaptive grid generation, P.R. Eiseman (1–3) 321–376

A general three-dimensional elliptic grid generation system on a composite block structure, J.F. Thompson (1–3) 377–411
Concurrent function evaluations in local and global optimization, R.B. Schnabel (1–3) 537–552
Global mode hourglassing control, J.C. Schulz (1–3) 553–566
Multisplittings and parallel iterative methods, R.E. White (1–3) 567–577

Optimization

Duality and variational principles of potential boundary value problems, G. Alduncin (1–3) 469–485
Mixed and penalty formulations for finite element analysis of an eigenvalue problem in electromagnetism, F. Kikuchi (1–3) 509–521
Concurrent function evaluations in local and global optimization, R.B. Schnabel (1–3) 537–552

Shells and plates

Nonlinear analysis of isotropic, orthotropic and laminated plates and shells, H. Rothert and W. Dehmel (1–3) 429–446

Solutions of ordinary and partial differential equations

Duality and variational principles of potential boundary value problems, G. Alduncin (1–3) 469–485

Structural mechanics

Nonlinear/linear unified thermal stress formulations: Transfinite element approach, K.K. Tamma and S.B. Railkar (1–3) 415–428
FE thermomechanics and material sampling points, E. van der Giessen (1–3) 447–465
Algorithms and experiments for structural mechanics on high-performance architectures, M.W. Berry and R.J. Plemmons (1–3) 487–507
Global mode hourglassing control, J.C. Shulz (1–3) 553–566

Supersonic flow

Calculation of external-internal flow fields for mixed-compression inlets, W.J. Chyu, T. Kawamura and D.P. Bencze (1–3) 21–37
A numerical model for supersonic reacting mixing layers, J.P. Drummond, R.C. Rogers and M.Y. Hussaini (1–3) 39–60
Flow solution on a dual-block grid around an airplane, L.-E. Eriksson (1–3) 79–93
Smoothing and the second law, M.L. Merriam (1–3) 177–193

Systems of linear and nonlinear simultaneous equations

Algorithms and experiments for structural mechanics on high-performance architectures, M.W. Berry and R.J. Plemmons (1–3) 487–507
Multisplittings and parallel iterative methods, R.E. White (1–3) 567–577

Transonic flow

Simulation of transonic flow in radial compressors, L.-E. Eriksson (1–3) 95–111
A comparison of numerical algorithms for unsteady transonic flow, W.A. Sotomayer, L.N. Sankar and J.B. Malone (1–3) 237–265

Transport phenomena

Characteristic Petrov–Galerkin subdomain methods for two-phase immiscible flow, M.S. Espedal and R.E. Ewing (1–3) 113–135
Velocity weighting techniques for fluid displacement problems, R.E. Ewing, R.F. Heinemann, J.V. Koebbe and U.S. Prasad (1–3) 137–151
Modified equation techniques for reactive-diffusive systems. Part 1: Explicit, implicit, and quasilinear methods, J.I. Ramos (1–3) 195–219
Modified equation techniques for reactive-diffusive systems. Part 2: Time linearization and operator-splitting methods, J.I. Ramos (1–3) 221–236

Viscous flow

Characteristic Petrov–Galerkin subdomain methods for two-phase immiscible flow, M.S. Espedal and R.E. Ewing (1–3) 113–135
Recent developments and engineering applications of the vortex cloud method, R.I. Lewis (1–3) 153–176
